FROM TOKEN TO FLEET

An AI Solution Architect's Handbook

From a single token's cost to a fleet of specialised models, this book traces how to reason about, build, and operate production AI systems. It moves from the economics of one token through parallelism, memory, and serving, up to fleet-level architecture and a red-team / green-team discipline for honest evaluation.

WHAT'S INSIDE

01 The token as the cost unit

02 Memory as the first constraint

03 Parallelism, batching & serving

04 Fleet-level architecture

05 Red-team / green-team evaluation

A pragmatic field guide for engineers and architects.

TRACE THE DECISION

From a single token's cost to the fleet that carries it.
Every architectural decision has a measurable trade-off.
