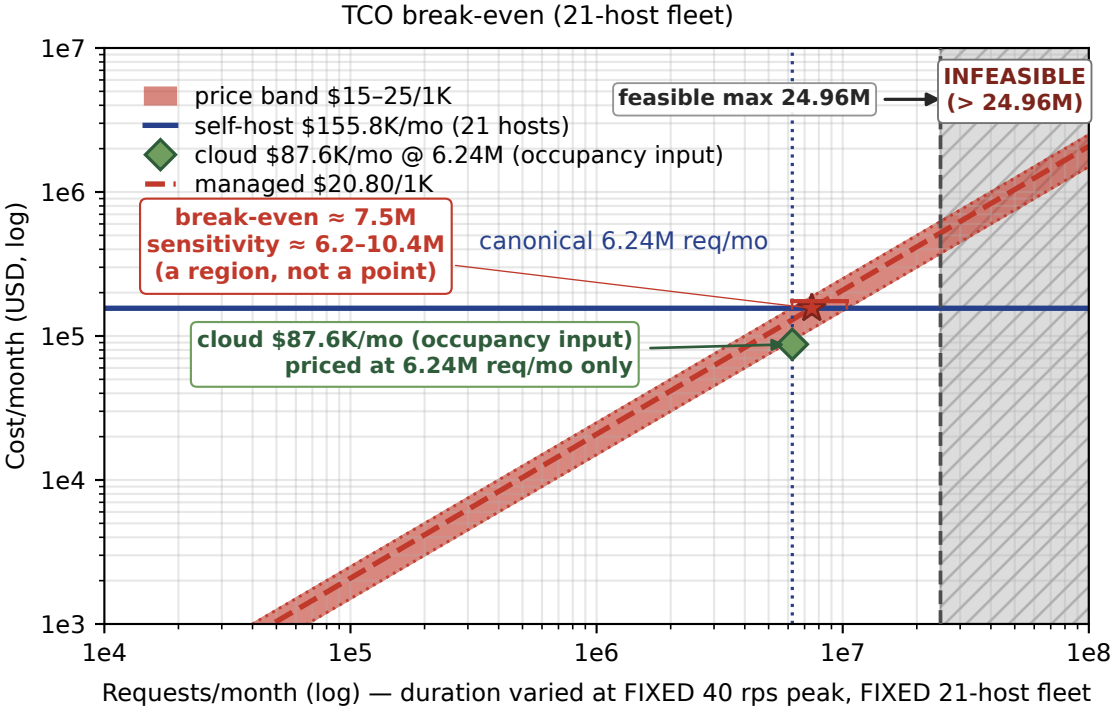
ILLUSTRATIVE SCENARIO — NOT APPLES-TO-APPLES (see Table 16-1 / Ch 16)



Assumptions: self-host flat ($155.8K/mo, 21 hosts, incl. $10K/mo staff);
cloud $87.6K/mo = 4,380 paid host-hours (occupancy INPUT, not a measured duty cycle).
Sensitivity: a $15–25/1K price band moves the break-even to ~6.2–10.4M req/mo.
x = 10 rps average × duration for the workload points; x varies duration/duty-cycle
at a FIXED 40 rps peak + FIXED 21-host fleet (option A), not re-sized: a frozen-fleet cost,
not a scalable crossover; feasible max = capacity 40 rps × 624,000 s = 24.96M req/mo.
