

The diagram illustrates a feedback loop between a Red Team and a Green Team. The Red Team (dark red box) sends probes to the Probes component (red box). The Probes component interacts with the Exposure surface (orange box), which is guarded by Guardrails (yellow box). The Guardrails component sends metrics to the Metrics component (teal box). The Metrics component then sends data to the Green Team (blue box). Below the Probes component, three probe domains are listed: Model behavior (jailbreak / persona), Tool use (escalation / fuzz), and Retrieval / RAG (poisoning, injection). A feedback loop arrow labeled "loop: findings inform the next probe cycle" connects the Metrics component back to the Probes component. A feedback loop arrow labeled "metrics failure → backlog (hardening / fixes)" connects the Metrics component to a Change-request backlog (owner + SLA + metric) box.

```
graph LR; RT[Red Team] --> P[Probes]; P --> ES[Exposure surface]; ES --> G[Guardrails]; G --> M[Metrics]; M --> GT[Green Team]; P -- "loop: findings inform the next probe cycle" --> M; M -- "metrics failure → backlog (hardening / fixes)" --> CRB[Change-request backlog (owner + SLA + metric)]; subgraph PD [probe domains]; MB[Model behavior (jailbreak / persona)]; TU[Tool use (escalation / fuzz)]; RR[Retrieval / RAG (poisoning, injection)]; end; MB --> P; TU --> P; RR --> P;
```
