Sizing a fleet of one model: burst peak, headroom, failover
Offered-load capacity only — not a proof of p99 TTFT/TPOT;
tail latency needs a measured queueing model (Ch 14)
N = 4 fleet capacity (~8.0)
N-1 residual (~6.0, 1 host drains)
headroom
failover
burst peak ~5.5 req/s
one host cannot meet
the burst on its own
one host
~2.0 req/s
offered load / req·s⁻¹
time of day
0
