

Agentic context accumulation: the KV block grows every turn

agentic depth is a fleet-sizing problem: KV grows ~36% (23.8 → 32.4 GB)

canonical example: $KV = 2 \cdot \text{layers} \cdot d_{\text{hidden}} \cdot \text{bytes} \cdot \text{total-tokens} @ 2.5 \text{ MB/token}$; total = $10 + T \cdot 6 + T \cdot \gamma$. [2° DERIVED, Ch19 §3]
