

Pattern Application Diagram

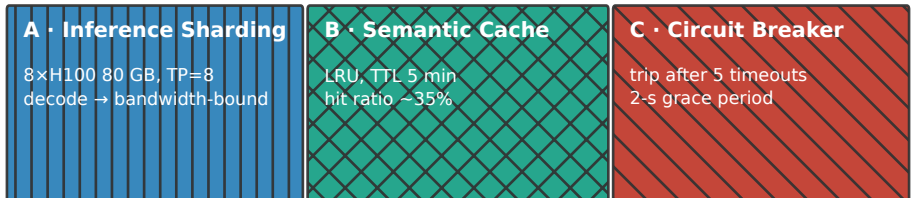

instrument → observe FACT → compute DERIVED → validate HYPOTHESIS → adjust pattern

the Pattern-Measurement-Feedback Loop applied to the capstone scenario (70B FP16 · 8×H100)

feedback: the observed effect feeds the next cycle

COMPOSITION — the patterns the loop selected, applied together

composed ⇒ 680 ms p99 · 40% lower generation cost (vs uncached, unsharded baseline)
