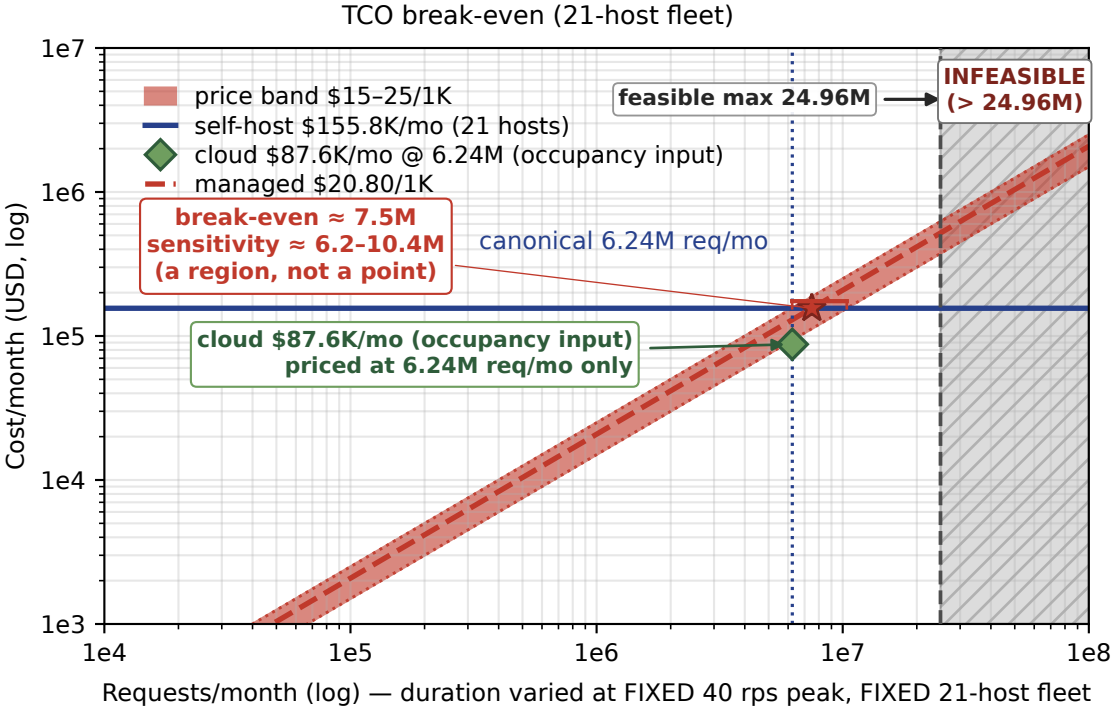
ILLUSTRATIVE SCENARIO — NOT APPLES-TO-APPLES (see Table 16-1 / Ch 16)



Assumptions: self-host flat ($155.8K/mo, 21 hosts, incl. $10K/mo staff);
cloud $87.6K/mo = 4,380 paid host-hours (occupancy INPUT, not a measured duty cycle).
Sensitivity: a $15–25/1K price band moves the break-even to ~6.2–10.4M req/mo.
x varies duration/duty-cycle at a FIXED 40 rps peak + FIXED 21-host fleet (option A),
NOT re-sized per volume: a frozen-fleet cost, not a scalable crossover.
Feasible max = 40 rps × 624,000 active s/mo = 24.96M req/mo; right of it INFEASIBLE.
