Sizing a fleet of one model: burst peak, headroom, failover
offered load / req·s⁻¹
time of day
fleet sized ABOVE the burst
(headroom + failover)
N = 4 fleet capacity (~8.0)
burst peak ~5.5 req/s
N-1 residual (~6.0, 1 host drains)
one host cannot meet
the burst on its own
one host
~2.0 req/s
offered load (burst)
N = 4 fleet capacity (~8.0)
one host bound (~2.0)
N-1 residual (1 host drains)
